Extended format alarms
Free over any path

WebWay. We are signalling.

Update your security

When connecting WebWay to your existing or new security systems you enable network monitoring, alarm signalling and DD263 compliant UDL in a single device. You're future proofed with IP technology on board and image verification upgrade.

Uninterrupted nights

WebWay's Smart Reporting works for you. Confirmed alarms are immediately delivered to the alarm receiving centre operator at any time. Keyholders have never been protected better. Unconfirmed faults are intelligently monitored for recovery or if persistent, the key holder is alerted at the unset. Total peace of mind with reduced out of hours visits.

Image verification

For high risk sites, which require verification, upgrade to WebWay Imaging to connect IP or analogue cameras to events. WebWay sends pre, post and trigger alarm images to the ARC operator even when the fixed line is cut.

WebWay World

Get information on your connections instantly and in real time whether you have one or dozens of connections. Order hardware, accessories, upgrades and software on line. Keep devices in stock before connecting to your favourite ARC. Watch training videos and access all the documentation you need.

Insurance approved for intruder and fire

Insurance companies require dual signalling to be fitted for all new, medium to high risk intruder alarms. WebWay is the only signalling provider to manufacturer in the UK and be independently approved for Grade 4 intruder and Fire Type 1 and 2 signalling under the BRE's CPD and LPS1277 Issue 3 scheme. Visit www.redbooklive.co.uk and search for WebWayOne to see our listing.

Global SIM, access all mobile networks

Every dual path WebWay is provided with a Global SIM with fixed IP address. Each system has access to all four UK network operators at no additional charge. Our private network keeps your security data safe by encrypting every message.

Free transmission

Your monitoring contract includes all charges for polling, alarms, UDL and Imaging over IP, GPRS and PSTN*.

Any line, simple installation

WebWay operates on any telephone or broadband line. The WebWay will automatically operate on your self installed broadband service. For IT departments visit www.webwayone.co.uk/IT-form for information on our simple, single firewall port configuration.

*UDL and Imaging not supported over PSTN

WebWay. Signalling solutions.

WebWay One Series. The antidote to digi's.

WebWay One Series is the antidote to digital communicators and BT21CN issues. One Series provides Grade 2 network monitoring, extended format alarms (or channels) and secure UDL using either GPRS or IP networks. Annual fees include all of this and are the lowest available. One Series GPRS is upgradeable to dual path GPRS/PSTN or IP/GPRS Grade 2, 3+ or 4.

WebWay G-Series. More as standard.

G-Series monitors your security systems using our Global SIM, telephone line or IP connection. G-Series signals extended format alarms and DD263 UDL securely over the GPRS radio path and monitors networks to G2, 3+ and 4 standards. Monitoring, signalling and UDL are free over any path*. G-Series has everything you need today and tomorrow with IP technology on board for upgrade to our Communicator solution.

WebWay Communicator. Intelligent and integrated.

Our Communicator range operates over your shared broadband connection and can be purchased as IP single path, IP/PSTN hybrid or IP/GPRS for ultimate security. Communicator supports extended format alarms, DD263 UDL over broadband and uses our Global SIM as it's secondary path. Communicator can be upgraded for verification using IP cameras or DVR systems. There are no telephone call charges and you do not need a dedicated line.

WebWay Image Verification.

G-Series and Communicator systems can be upgraded to verify events using IP cameras (or analogue cameras connected to an IP encoder). Imaging operates over your broadband connection and our Global SIM, transmitting verification even when the line has been cut.

Grade	Reporting time
Grade 2	24 hours
Grade 3	1 hour
Grade 3+	11 minutes
Grade 4	3.5 minutes

WebWayOne Ltd.

WebWayOne is an international service provider for the security industry. Our headquarters, development, manufacturing and support are in the UK. We've provided secure communications solutions to leading retailers, banks, businesses and domestic properties in ten countries.

Our solutions have been independently tested by the UK's leading approval body, the Building Research Establishment and their Loss Prevention Certification Board, the only test house to have a team dedicated to the security industry and it's European requirements.

We've brought new innovation to market using a measured quality process, making sure that the products installed operate to the highest standard, using the best technology available. We've been first to provide a Global roaming SIM as standard with all our dual path systems, we've the largest catalogue of system integration and our real time management solutions deliver real peace of mind to monitored connections and those that rely on them.

"Aviva recognises the benefits of using products and services that have been independently assessed. Companies achieving LPCB approval to LPS1277 Issue 3 demonstrate a commitment to providing quality products that assists specifiers and end users in making informed choices." Richard Underwood. Risk and Security Specialist. Aviva Risk Management Solutions.

"LPCB approval to LPS1277 Issue 3 provides specifiers with assurance that installed product will operate to specification. WebWay solutions are LPCB approved for intruder and fire signalling." Martin Aris. BRE Associate.
